1 Writing context-free grammars

This is an exercise in writing context-free grammars (CFGs) to capture generalizations about natural language syntax. You can use an automatic parser available in NLTK to check whether your grammar accounts for the key generalizations. To get you going, consider the following grammar that we covered in the CFG lecture notes:

```
\begin{array}{lll} \text{NP} \rightarrow \text{Det N} & \text{N} \rightarrow \text{woman} \\ \text{NP} \rightarrow \text{NP PP} & \text{N} \rightarrow \text{umbrella} \\ \text{PP} \rightarrow \text{P NP} & \text{N} \rightarrow \text{street} \\ \text{Det} \rightarrow \text{a} & \text{P} \rightarrow \text{about} \\ \text{Det} \rightarrow \text{an} & \text{P} \rightarrow \text{with} \\ \text{N} \rightarrow \text{joke} & \text{P} \rightarrow \text{on} \end{array}
```

Running the following code will parse the string a joke about the woman with an umbrella on the street with start symbol (i.e., goal category) NP, generating the five parses that we saw in the CFG lecture notes. Note that NLTK's CFG.fromstring() function takes the left-hand-side of the first rule listed as the goal category, and allows multiple rewrites for a single category to be expressed with a disjunction on the right-hand side of a single rule, so that the rule X -> Y1 ... Ym | Z1 ... Zn is shorthand for the two rules $X \to Y_1 ... Y_m$ and $X \to Z_1 ... Z_n$.

```
import nltk
from nltk import Nonterminal, nonterminals, Production, CFG
grammar = CFG.fromstring("""
NP -> Det N | NP PP
PP -> P NP
```

- A. Write a context-free grammar that will capture the structural ambiguity in the sentence *They are flying planes*. Your grammar should respect the facts that (i) an NP should be substitutable with a pronoun given the right context; and (ii) a verb and an immediately following NP can combine to form a VP. You can check your work with the NLTK parser to make sure that your grammar behaves the way you think it will behave.
- B. Extend your grammar to capture the structural ambiguity in the sentence Flying planes can be dangerous. (Hint: a non-finite VP can serve as the subject of an English sentence, such as in the sentences To err is human or Defeated by the Miami Heat is not how I expected the Milwaukee Bucks to finish in the NBA playoffs, and it is OK to use a unary rewrite rule with a right-hand-side element that is a phrasal category. See SLP3 Section 12.3.1 for an example of this, though it is a different unary rewrite than you would use for this problem.)
- C. The ambiguity of the preceding sentence is eliminated if you change *can be* to either *is* or *are*. Why? Modify your grammar so that it captures this disambiguation effect.

2 Argument structure and unbounded dependencies in context-free grammars

Let's start with the following grammar in NLTK style (i.e., $X \rightarrow Y1 \dots Ym \mid Z1 \dots Zn$ means that there are two separate rules, $X \rightarrow Y1 \dots Ym$ and $X \rightarrow Z1 \dots Zn$):

```
\rightarrow NP VP
S
NP
             \rightarrow Det N | Pronoun
VP
             \rightarrow V
VΡ
             \rightarrow V NP
VP
             \rightarrow V SBAR
SBAR
            \rightarrow WHNP S
SBAR
            \rightarrow COMP S
COMP

ightarrow 'that'
WHNP \rightarrow 'who' | 'what'
Det
             \rightarrow 'the' | 'a' | 'an' | 'my' | 'your' | 'her' | 'his' | 'their'
             → 'joke' | 'women' | 'umbrella' | 'street' | 'apple'
Ν
{\sf Pronoun} \rightarrow {\sf 'I'} \mid {\sf 'you'} \mid {\sf 'she'} \mid {\sf 'he'} \mid {\sf 'they'}
             \rightarrow 'slept' | 'devoured' | 'know' | 'said' | 'know'
```

(Note: the rule COMP -> 'that' | expands out to COMP -> 'that' and COMP -> , the latter of which is NLTK's way of expressing an empty rewrite (i.e. it's equivalent to COMP $\rightarrow \epsilon$). This grammar will give correct parses for sentences like:

- (1) I devoured the apple
- (2) I said you slept
- (3) you know what I devoured

However, it will incorrectly accept sentences like:

- (4) *I slept that you said
- (5) *the women devoured
- (6) *I know what you said the joke

and incorrectly reject sentences like:

- (7) you know who slept
- (8) the women know who I said devoured the apple
 - A. Revise the grammar so that it correctly accounts for the different **argument structures** of the different verbs. Your grammar should now correctly reject (5) and (6) but incorrectly reject (3).
 - B. Want a challenge? Examples like (8) involve UNBOUNDED DEPENDENCY constructions as covered in class. Implement meta-rules, using S, NP, VP, and SBAR as your BASIC CATEGORIES, and the non-terminal rewrites in the grammar as your BASIC RULES, to add a set of new DERIVED CATEGORIES and DERIVED RULES to your grammar. Your grammar should now correctly accept and reject all the above examples. (This challenge is not worth any points, but we will give you feedback on any solution you offer.)
